

### Intent:

At Croft CofE school the teaching of computing aims to allow the pupils to build independent and confident learners who plan, design, create, program and evaluate information through the use of ICT. We are aware of the risks, therefore we prepare our children to stay safe online through a robust Online Safety Curriculum, as well as promoting online safety. Pupils are living within an increasingly technological world and it is vital that we develop confidence and knowledge in this area. Computing skills are taught and applied within discrete sessions so that they can be applied across the curriculum to enhance other subjects.

### Implementation:

Pupils use a range of technology to find, explore, analyse, exchange and present information responsibly, creatively and with discrimination. They learn how to employ computing to enable rapid access to ideas, information and experiences from a range of sources, people, communities and cultures.

Impact: As children leave primary school, we aim for children to transfer this knowledge and have the confidence to implement these skills in everyday situations. Increased capability in the use of computing promotes initiative and independent learning, with pupils being able to make informed judgements about when and where to use computing to best effect, and to consider its implications for home and work both now and in the future.
